

From reactive to **proactive:** modernising operational workflows

Say hi!

This will be a collaborative session, so before we get started introduce yourself to your neighbours.

Sam Brunton
Account Executive

Customer Success
Manager

Agenda

01

Introductions

02

Understand, act
& improve

03

Modernised
workflows:
Investigations

04

Modernised
workflows: Asset
Management

05

Group breakout
sessions

Where are you feeling the **most friction**?

Lack of visibility

into frontline conditions, hazards, or performance metrics

Project delays

caused by rework, unexpected equipment downtime, or workplace injuries

Profitability impacts

from safety incidents, compliance fines, or operational inefficiencies

Manual, paper- based processes

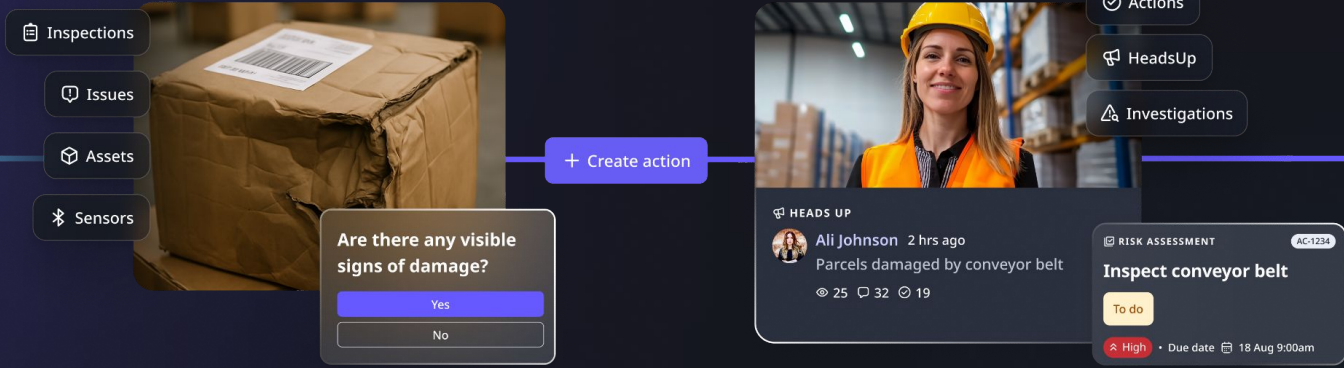

processes that are slow, error-prone, and hard to scale

Outdated or inconsistent templates

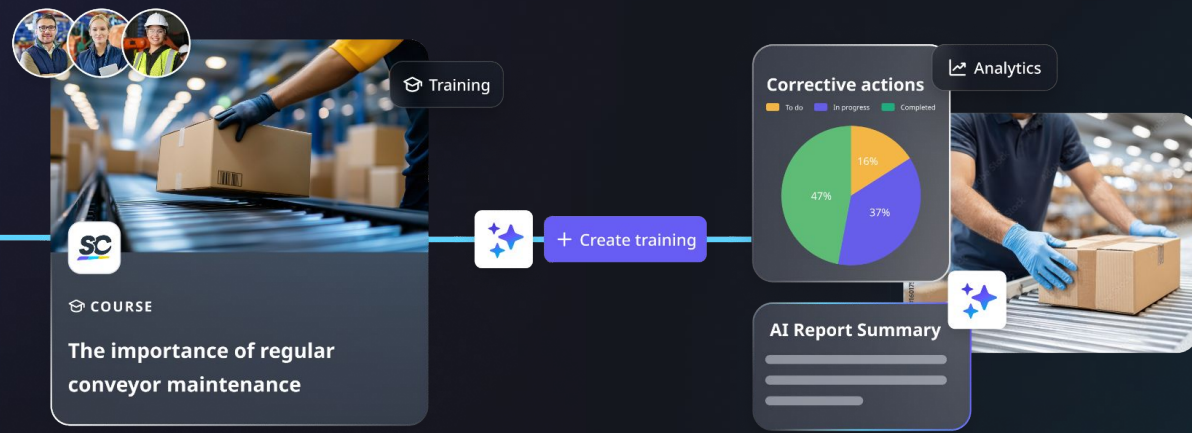

that no longer reflect how work actually happens

Disjointed systems and teams

where inspections, issues, actions, and assets live in silos

Understand. Act. Improve.

**What's the most fragmented part of
your processes today?**

**What would be your priority for creating a more
connected, cohesive operation this year?**

Your source of truth for incident **investigations**

Has the hotel room
been damaged?

Yes

No

9:41

Report issue

Damage

Title
Damage on level 4 carpet

Description

Add images or video? (optional)

Issue created
Damage on level 4 carpet

Now

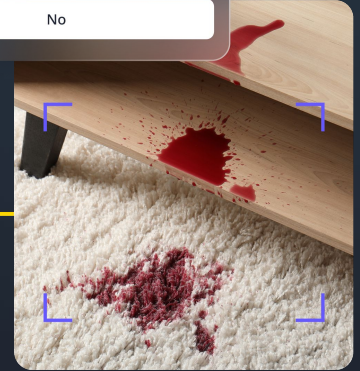

Start investigation

Are there signs of damage
through-out the level?

Yes

No

Add media

Raise an issue

Start investigations

Gather evidence

Your source of truth for incident **investigations**

+ Create action

📋 ACTION AC-1234

Remove food trays from hallway

To do

🔴 High • Due date 📅 19 Aug 10:00am

Determine root causes

Assign corrective actions

Your source of truth for incident **investigations**

Corrective actions

COURSE

Cleaning and regular
maintenance training

Time to renew your
certification!

Track process & manage access

Improvement & prevention

1

What gets in the way of turning an incident into a learning opportunity? Time, resources, or team buy-in?

2

How often are we reporting issues but only having the data logged for compliance purposes?

3

If you could prevent just one type of repeat incident in the next year, which would you target first, and how would you approach it?

Your single stop for **Asset** management

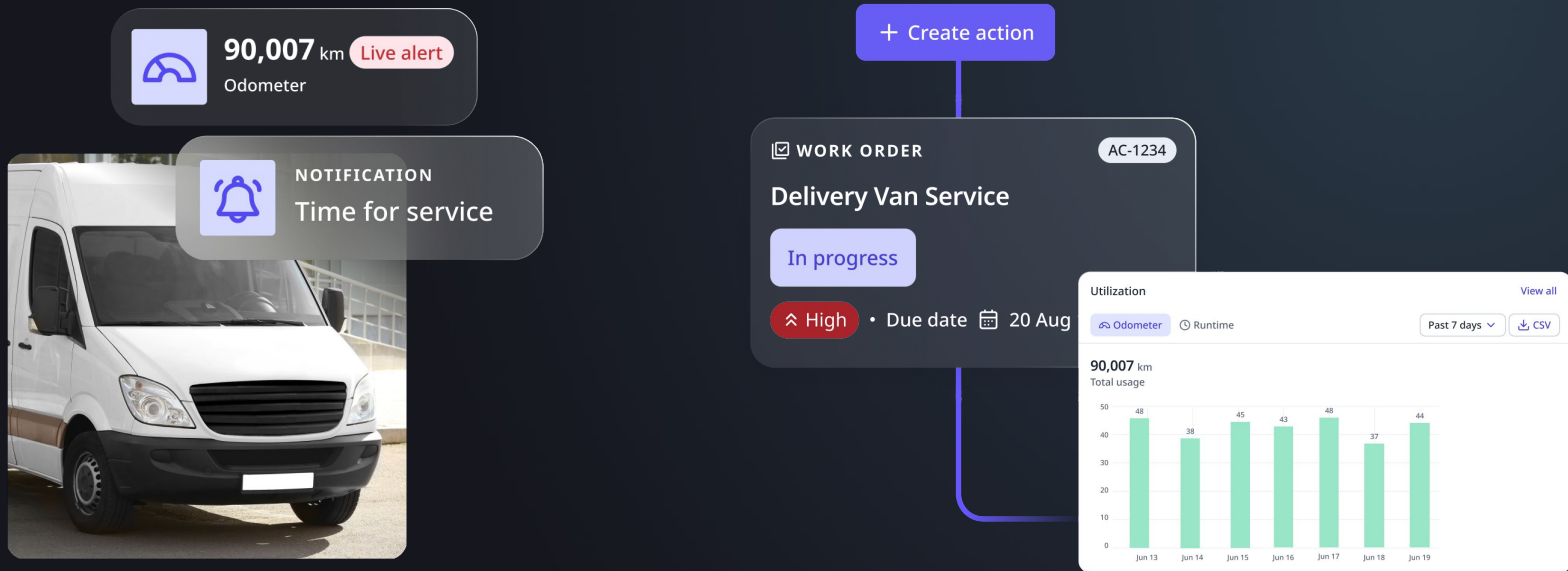

Digital asset register

Regular safety & condition checks

Automated preventative maintenance

Your single stop for **Asset** management

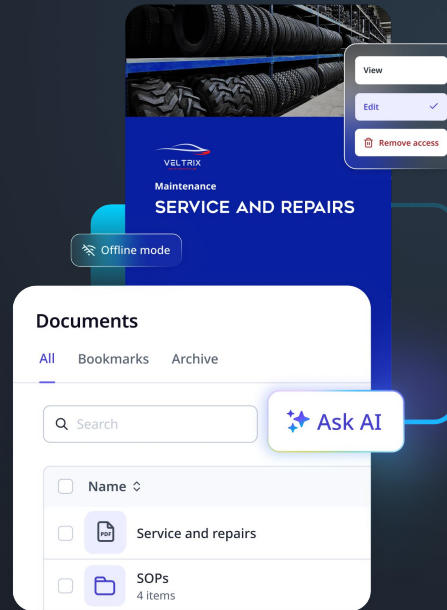

Work order tracking

Resource utilisation & planning

Your single stop for **Asset** management

AI Report Summary

Data-driven decision making

Training & documentation

1

Where do you currently lose visibility over your assets, and what risks or costs does that create for your team or business? (eg. servicing dates, usage levels, location)

2

If you could put one part of your asset maintenance or inspection process on autopilot, what would it be, and what impact would it have on your team or operation?

Breakout & Discussion

1

If you had zero constraints, what's one proactive workflow you'd implement tomorrow?

2

What's your biggest barrier to proactive workflows and how could technology help overcome it?

3

Where in your current processes could connected workflows (inspections, issues, assets, actions) make the biggest impact?

4

Share an example where going proactive made a measurable difference in your operations.
